

Research Mission of the German Marine Research Alliance (DAM) »Marine carbon sinks in decarbonisation pathways«

CDRmare structure

The 6 CDRmare research consortia

Assessment framework for marine CO₂ removal and synthesis of current knowledge

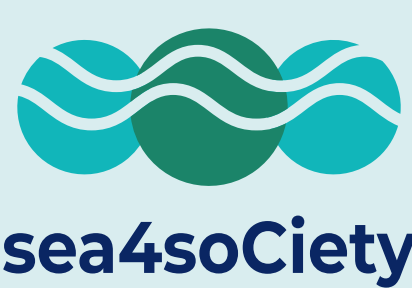

Submarine carbon dioxide storage in geological formations of the German North Sea

CO₂ removal by alkalinity enhancement: potential, benefits and risks

Ocean artificial upwelling

Searching for solutions for carbon-sequestration in coastal ecosystems

Alternate scenarios, Innovative technologies, and Monitoring approaches for Sub-Seabed Storage of carbon dioxide
